

CUYAHOGA CENTER I & III

Cuyahoga Heights, Ohio

Herman Gibans Fodor, Inc., working as a design-build partner with Drake Construction, designed the rehabilitation of an existing two story 44,000 square foot structure. This included the reconstruction of the entrance canopy and the complete redesign of the lobby areas.

The new cast stone material introduced on the exterior is carried into the reconfigured lobby space. The stone, combined with aluminum and glass storefront windows, natural finished maple doors, patterned glass borrowed lights and textured paint, create a refined interior work environment.

An existing truck bay and service facility were also converted into office areas and a fitness center. The work included a new vestibule addition along with the installation of aluminum and glass storefront windows in existing overhead door openings.
